EDUCATION

University of New Brunswick

Bachelor of Computer Science, Co-op

Fredericton, NB

Expected May 2028

EXPERIENCE

Software Developer

May 2026 – Present

Steel Plus Network

Remote, Canada

- Implemented rebate calculations for two suppliers with distinct tonnage-based and purchase-dollar contracts, separating calculation models while sharing Access reconciliation and payout workflows.
- Designed a **C#/.NET Framework** bridge with Python for Access schema inspection, reviewable source exports, and validated working-copy updates.
- Constrained automated Access bridge writes to approved working copies with protected-target and lock checks, pre-change backups, and hash-verified restoration to support recovery.

Co-Founder & Engineering Lead

Apr. 2026 – Present

Hack Atlantic

Fredericton, NB

- Led technical delivery of a team-built Next.js/Go platform for Hack Atlantic, supporting **200+** applications for an event backed by **\$17K** in sponsorships.
- Led delivery of a GitHub Actions pipeline that deployed the same Docker API image tested in staging to production.
- Implemented QR check-ins with **PostgreSQL row locks** and saved request results, enforcing per-attendee checkpoint limits and preventing retries from creating duplicate records.

Founding Software Engineer

Mar. 2026 – May 2026

Spotlight

Fredericton, NB

- Migrated a React Native student app from direct Supabase access to an independently implemented **Spring Boot/PostgreSQL** backend, centralizing authorization and business logic while preserving existing login.
- Implemented a Spring Boot matching engine that ranked students using weighted questionnaire responses, applied preference and block filters, and explained matches through shared traits.

Database Systems Developer Intern

May 2025 – Aug. 2025

Steel Plus Network

Remote, Canada

- Reduced manual report-generation time by **over 50%** by migrating **1,000+** historical records from Excel into normalized Microsoft Access tables and developing SQL/VBA reporting workflows.
- Corrected inflated purchasing reports by tracing SQL joins to duplicate annual summaries, removing duplicate rows, and enforcing one summary per member and year with a composite unique index.

PROJECTS

Wayward: Scenic Route Planner | [GitHub](#) | *Spring Boot, Kafka, PostGIS, Redis, Next.js*

- Engineered a Spring Boot scenic-route planner that generated driving loops from a starting point and time budget, combining OSRM route construction with **19** geographic and road-quality scoring signals in PostGIS.
- Reduced lookup time by **97.2%** (3.213 s to 90 ms) in a local 1,500-tile real-Redis benchmark, replacing sequential reads with one MGET over identical preloaded keys.
- Made route generation recoverable by committing jobs with a **PostgreSQL outbox** and retrying failed Kafka dispatch, using worker-lease checks to prevent outdated workers from overwriting newer results.

Breakpoint: Traffic Disruption Simulator | [GitHub](#) | *Rust, React, TypeScript, Python*

- Developed a React/TypeScript beta for comparing modeled road-closure impacts across five cities, with scenario previews and saved-result comparisons backed by a shared Rust service.
- Implemented bounded Rust jobs with input-based IDs and saved results, reopening completed analyses after restart.
- Implemented a deterministic **Rust** traffic-modeling engine using Frank-Wolfe, withholding road-closure comparisons until convergence and route-legality checks passed and modeled demand was accounted for, including trips without a route.

LazyDrop: File Sharing Platform | [GitHub](#) | *Next.js, Spring Boot, PostgreSQL, S3-Compatible Storage, WebSockets*

- Replaced backend-proxied uploads in a Next.js/Spring Boot file-sharing app with signed browser uploads to **S3-compatible storage**, retaining backend membership checks and client-confirmed metadata.
- Implemented live file and participant updates within sharing rooms using Spring WebSockets and process-local messaging.

SKILLS & INTERESTS

Languages: Java, C#, Go, Rust, Python, JavaScript/TypeScript, SQL, PowerShell, VBA

Frameworks & Libraries: Spring Boot, .NET Framework, Next.js, React, React Native, Expo, Tailwind CSS

Data & Messaging: PostgreSQL, PostGIS, Microsoft Access, Redis, Kafka, Supabase, WebSockets

Cloud & DevOps: Docker, GitHub Actions, Terraform, Microsoft Azure, DigitalOcean, Vercel, Git, CI/CD

Testing & APIs: Playwright, Vitest, k6, Automated Testing, REST APIs, OpenAPI, Database Migrations

Core Concepts: Algorithms & Data Structures, Distributed Systems, Concurrency, Database Design, Agile/Scrum

Interests: Table tennis, piano (church pianist), Rubik's Cube solving
